

# MOVEMENT EQUALS IMPROVEMENT

**Q**uadriciser®  
Robotic Therapy System  
*Movement Equals Improvement*

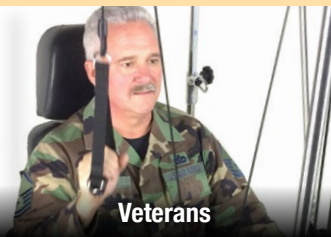

**GENTLY**  
**MOVES ALL**  
**4 LIMBS**  
**MULTI DIRECTIONS**

The Quadriciser Robotic Therapy System (QRTS) is a powerful yet gentle medical device that helps individuals with minimum to severe disabilities. Because the QTRS increases range of motion without pain, we see many with contractures open their hands for the first time in years.

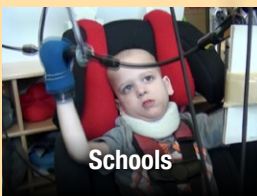

The Quadriciser's extreme versatility allows the arms to be manipulated in almost any motion including crossing midline while moving the legs in a walking pattern.
